

COMMONWEALTH OF PENNSYLVANIA

EIGHTH ANNUAL STATISTICAL REPORT

of the

Department of Welfare

E. ARTHUR SWEENEY
Secretary

1942

Bulletin No. 85

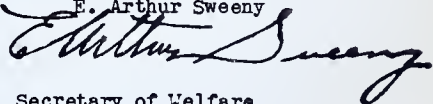

Mental Health

Section A

In the presentation of the material on the mentally ill and mentally deficient in Pennsylvania it will be noticed that the institutions continued their upward trend with an increase of 1348 patients for the year ended May 31, 1942. The unusually large increase of the mental patients in the State-owned institutions is caused by the fact that the State began operation of four County Mental Hospitals.

The Western State Psychiatric was opened on September 11, 1942. The institution provides for Pennsylvania, for the first time, an opportunity for psychiatric research and teaching. In addition, it provides an out-patient clinic and service to Courts and Social Agencies needing psychiatric services.

The Mental Hospitals, as well as the Department, have had a difficult problem in maintaining trained personnel. The turn-over has been great. The Armed Forces have taken their quota. Private industry, offering more money, has taken many of the experienced and trained people from the institutions. Consequently the problem of maintaining standards for mental hospital management has been very difficult.

E. Arthur Sweeny

Secretary of Welfare

THE BUREAU OF MENTAL HEALTH

In accordance with the established custom, the Statistical compilations in regard to mental patients in Pennsylvania for the year ended May 31, 1942 again constitute Section A of the Eighth Annual Statistical Report of the Department of Welfare. As indicated in the comment on the statistics for the year ended May 31, 1941 in the Seventh Annual Report, the application of the Complete State Care Act has resulted in a change in the name and classification of a number of institutions formerly conducted by the various counties. Three county hospitals, Mercer, Schuylkill, and Lancaster, have been discontinued. The Allegheny County Hospital is now the Woodville State Hospital; the Blair County Hospital is the Hollidaysburg State Hospital; the Chester County Hospital is the Embreeville State Hospital; the Pittsburgh City Home and Hospital in so far as the mental department is concerned, has become the Mayview State Hospital; the Somerset County Hospital has become the Somerset State Hospital.

The three Lackawanna County institutions, the Hillside Home and Hospital, the Blakely Home and Hospital, and the Ransom Mental Hospital, also the Retreat Mental Hospital, Luzerne County, remain under local supervision, although fully financially supported by the State, pending a Court decision on a question of ownership. There is a definite plan as to the disposition of these four remaining County institutions when the Court proceedings are finally settled.

In view of the above changes, the present tables and charts refer to fourteen State owned mental hospitals, one State aided mental hospital; three State owned institutions for mental defectives; one State owned colony for epileptics; and the four remaining licensed

County mental hospitals. Although the final settlement of these four county institutions has not yet been reached, the circumstances are such that the statistical information has been included with the other State owned mental hospitals.

As in former reports, the tables presented at this time do not by any means represent all the available information in the Department of Welfare concerning mental patients. Through the mechanical tabulation of the coded and punched cards of individual patients, almost any combination of statistical data is possible. The tables selected for publication are those believed most likely to illustrate the extent of the problem in Pennsylvania and to make it possible to compare similar activities in other States.

The table showing the percentage of occupancy in State institutions illustrates the necessity for further expansion of accommodations and the desirability for a comprehensive building program for the future. The closing of certain County hospitals has resulted in greater overcrowding, as the patients needing treatment had to be transferred to existing State hospitals. Thus, a considerable portion of the increased bed capacity made available by the last extensive building program has now been filled. Furthermore, the county institutions taken over for State hospital purposes are also crowded, are lacking in certain essential facilities and, in the case of several very small places, have little to offer patients except custodial care. These small institutions require extensions and additional facilities before they may rightly be called hospitals. A supplemental building program under the auspices of the General State Authority is now proceeding favorably and before another year should result in the addition of about 1,500 beds to the

Philadelphia State Hospital. Plans are available for needed extensions at other hospitals, including especially Farview, Norristown, Torrance and Warren; also the State Schools of Polk and Pennhurst, whenever it becomes possible to resume building operations. The net increase in patient population in the State mental hospitals for the year ended May 31, 1942 was 807 as compared with 614 for 1940. Some of this increase represents merely a shifting of patients from discontinued county hospitals to state hospitals. The average net annual increase in all Pennsylvania mental hospitals, except the private hospitals for a twenty year period has been 788. Attention is again called to the creditable number of patients discharged as recovered or improved. Furthermore, over twelve per cent were on parole, many of whom will probably be formally discharged as recovered or improved at the expiration of a twelve month leave of absence, and at the end of the fiscal year of 1943.

The psychiatric diagnoses of 5,783 first admissions to the State mental hospitals (see table No. # II) are interesting because they illustrate the relative frequency and, in comparison with other years, the trends of various conditions. The following diagnostic groupings are listed as of 1942 for comparison with 1939, 1940, and 1941.

	<u>1942</u>	<u>1941</u>	<u>1940</u>	<u>1939</u>
Dementia Praecox	24.3	24.3	25.2	23.0
Syphilitic Meningo Enciphalitis	8.8	9.6	9.8	10.0
Senile	12.4	9.9	9.4	8.7
Manic Depressive	9.6	7.2	8.8	9.5
Cerebral Arteriosclerosis	11.1	10.5	7.6	7.8

As noted in the last report, there were considerably more men than women among first admissions, and the same is true of those remaining in the hospitals.

The table, "Age Groups of First Admissions to Mental Hospitals", merits attention, especially as to the number who were over 55 when admitted; also the number 70 years or over. These age groupings should be noted particularly in considering the death rates. It is probable modern living trends, such as small apartment homes, make it more difficult to keep the aged with the family, but it should not be necessary to commit to mental hospitals so many old persons who may indeed be forgetful, but many of whom need only kindly custodial supervision.

There were 563 first admissions to the three State owned institutions for mental defectives. During the same period 363 were discharged of which 140 were recorded as improved, 66 as unimproved and 154 died.

The new buildings at Selinsgrove Colony were opened during this biennium and it became possible to admit a selected number of women and children. The new hospital building provided much needed equipment for diagnostic study and treatment.

The table showing the length of residence of the total population in State mental hospitals for the year ended May 31, 1942 deserves special study. It graphically illustrates the gradual accumulation of certain cases resulting in a net annual increase requiring additional institutional accommodations. For example, of the 39,009 patients as of that date 12,987 had been in the hospitals ten years and over, 6,578 of whom were dementia praecox cases. In the institutions for the mentally deficient and epileptic 3,077 of the total 7,349 had been in residence ten years and over.

In so far as the mentally ill are concerned, it is hoped that new forms of treatment such as the various types of shock therapy

will ultimately modify the picture of length of residence. In fact, these new forms of treatment have resulted in an improved outlook for recovery in a number of cases long regarded as unfavorable. It is unfortunate that during the present difficult period, by reason of shortage of personnel, including physicians and nurses, and other factors, a great deal of special treatment will have to be curtailed or, in some instances, even temporarily discontinued.

Mention should be made of the Western State Psychiatric Hospital at Pittsburgh. This institution, long in planning and in being built, was formally dedicated on September 11, 1942 and the first patients received in November. Designed primarily for educational and research activities, this hospital will be the centre of inspiration and leadership for high standards of study and treatment of mental patients throughout Pennsylvania. It will be represented in the statistical compilation for the year ended May 31, 1943.

William C. Sandy, M. D.

EIGHTH
ANNUAL STATISTICAL
REPORT

of the

Department of Welfare

E. ARTHUR SWEENY
Secretary

1942

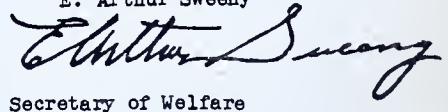

This statistical report for 1942 dealing with Pennsylvania's penal institutions, I am happy to say, shows a different picture from the report for the preceding year. There has been, during 1942, a decrease in criminal commitments both for major crimes and minor delinquencies.

The operation of the National Selective Service Law has had much to do with this decrease and the change from depression to industrial activity has removed many from temptation to commit crime.

To draw definite conclusions from the record is, of course, impossible; but it suggests to this Department that increased employment opportunities, whether in military or industrial pursuits will contribute to reduce crime in the age groups above 18 years.

Whether a decrease in crime during busy periods will be followed by an increase in crime, if and when a recession occurs, is a matter which challenges the attention and careful study as well as the activities, of this Department, of our jurists, parole boards, penologists, and scholars. The work of crime prevention and cure must continue unabated.

E. Arthur Sweeny

A handwritten signature in dark ink, appearing to read "E. Arthur Sweeny", written in a cursive style.

Secretary of Welfare

BUREAU OF CORRECTIONS

The Bureau of Corrections, that branch of the Department of Welfare which inspects, supervises and regulates the Penal and Correctional Institutions of the Commonwealth of Pennsylvania, herewith submits data and statistics gathered from all prisons throughout the State.

This Bureau is governed by Laws and Acts of Legislature, and the Administrative Code, and its primary duties are to inspect and regulate all institutions in the penal group, and to establish standards for physical maintenance in these institutions whereby persons who are so unfortunate as to be confined therein receive just, humane and considerate treatment.

Penal Institutions in the Commonwealth have progressed considerably in the last decade. Prisons today are not just places of detention for the safe-keeping of law violators. Special classification of each offender is made; special treatment is afforded when needed; school and trades are offered where an aptitude for such is manifested; hospitalization and surgery to correct illness which may have been the basis for crime, is available; psychiatrists analyze those offenders who require mental adjustment; special interviews by representatives of the Bureau of Corrections give the offender the sense of having his welfare taken care of by an unbiased third party. Careful study, treatment and expenditure is made in each individual case. In all, the offender is being rehabilitated for the time when he returns to society with a greater chance of becoming a respectable, law abiding citizen.

The charts and tables presented herein are clear, definite pictures of problems of the offender; the administration of the institution and

the Department of Welfare. Space, which limits detailed explanations, will allow for a few major comparisons:

New commitments to the State Penal and Correctional Institutions were 2378 for the period ended May 31, 1941, as against 2058 for the period ended May 31, 1942. This reduction in the number of commitments may be attributed to the War, and Defense programs. The induction into Service and the creation of employment has eliminated idleness and the inclination to indulge in unlawful practices. The efforts of the Courts to place on probation such cases as warrant leniency and consideration have also contributed to this reduction.

There were 3348 persons discharged from the institutions for the year ended May 31, 1941, and 3611 discharged for the year ended May 31, 1942, which shows that a greater number of persons were returned to homes, jobs and society.

There were 180 less court commitments to the Pennsylvania Industrial School, Camp Hill, and the Pennsylvania Industrial School, Huntingdon, for the period ended May 31, 1942, than the year ended May 31, 1941. This comparative table shows that the War, and Defense program is reducing the potential number of prisoners to these two schools.

Commitments to the institutions by division of the type of crime show the majority of the offenses to be Robbery, Burglary and Larceny. The increase in commitments for sex crimes is due to the larger number of convictions by Courts on commercialized vice charges in districts where Army camps and Servicemen are located.

The largest group of inmate population is under the age of 21 years, and the next highest group is between 21 and 24 years of age. This may explain the chart showing the marital status of inmate population as 1484 single and 306 married. The difference, to a large extent,

is due to the youth of many boys committed to the Industrial Schools.

The increase in population at the Pennsylvania Training School, Morganza, for the period ended May 31, 1942, is in all probability due to the fact that the present administration at the Institution has established a much improved and extensive training program for the rehabilitation of boys and girls, and that the different Courts in the Western division of the State are cognizant of this change, and have shown a preference for committing delinquents to that Institution rather than to the different county institutions. A chart showing parental status of these boys and girls shows the major portion of them have both parents, which leads to the deduction that there is a great lack of parental guidance and authority in the home and among parents. The ages of this group range from 10 to 20 years.

The inmate days and average daily population of the county prisons were reduced for the year ended May 31, 1942, which reduction shows that less minor crimes were committed. Actual commitments to the county prisons for the year ended May 31, 1941 were 6114, against 5737 for the period ended May 31, 1942.

Many transfers of inmates from one institution to another have been completed during the year. The penitentiaries have been over populated and an amicable agreement between the institution, the county authorities and the Department of Welfare, has alleviated the over-crowding and materially assisted in prison industry and farming. It has also placed the idle prisoner in a position where he may be employed and enable him to do his time in a more useful manner.

The institutions inspected and supervised by the Bureau of Corrections are as follows:

Eastern State Penitentiary, Philadelphia; New Eastern State Penitentiary, Graterford; Western State Penitentiary, Pittsburgh; New Western State Penitentiary, Bellefonte; State Industrial Home for Women, Muncy; Pennsylvania Industrial School, Huntingdon; Pennsylvania Industrial School, Camp Hill; Pennsylvania Training School, Morganza; Allegheny County Work House, Blawnox; House of Correction, Philadelphia; and 68 County Prisons (including the Holmesburg and Moyamensing Branches of the Philadelphia County Prison), and the Broadmeadows Prison Farm, (a branch of the Delaware County Prison).

In addition to these institutions, 500 City, Borough and Township Lock-ups come under the supervision of the Bureau of Corrections. There were formerly 668 lock-ups in this group, but because of certain standards of sanitation and physical maintenance required for the care of prisoners confined therein, many of the smaller municipalities have chosen to use a neighboring approved lock-up, or the County Prison, rather than make extensive repairs, thereby reducing the financial burden of the taxpayer.

It is thought the most significant facts have been brought out in this prelude to statistics, charts and graphs; however, it is not our intention to have covered all of the material set forth, and many similar comparisons could be made.

Fred W. Brady

Director

Bureau of Corrections

COMMONWEALTH OF PENNSYLVANIA

EIGHTH
ANNUAL STATISTICAL
REPORT

of the

Department of Welfare

E. ARTHUR SWEENY
Secretary

1942

Bulletin No. 85

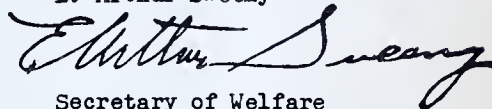

General

Section C

This Section of the Eighth Annual Statistical Report is a summary of the material of the various Bureaus, with some interpretive data by the various Bureau Directors. The statistics on the mentally ill and the prisoners in the State-owned and County institutions is contained in Sections A and B respectively.

The information embodied in this report is necessary for the Department to properly analyze and evaluate the operating costs, budgetary allocations, services, and dietary requirements.

E. Arthur Sweeny

WHERE THE WELFARE DOLLARS GO

BUREAU OF INSTITUTIONAL MANAGEMENT

The Bureau of Institutional Management is responsible to the Commonwealth and thirty-seven State-owned institutions for developing and supervising a program providing food, clothing, laundry, light, water, heat, farm products and general maintenance. Standards for goals of performance are promoted. Key employees are called together for conferences on important problems. Monthly summaries of data reflecting efficiency of the food, laundry, hospital, farm and engineering service records are issued to institutions.

Dietary

Tables I and II show the ration or the daily per capita food requirements which have been estimated for the different types of institutions for a period of one year. This ration has been based on the essentials of a low cost adequate diet. It is used as a yardstick in judging the adequacy of the institutional food consumption. It is also used as a guide in planning the production of the institutional farms and in the purchase of perishable foods to supplement such production, as well as in the purchase of staple foodstuffs.

The variation as to the performance of the different institutions is attributed to factors such as weather and soil conditions; physical conditions within the institutions such as canning, storage and preparation facilities, and number of personnel as well as psychological and budgetary factors. Quality, variety and economy are stressed and every attempt is made to insure adequate food consumption and satisfaction for both patients and personnel. The waste figure denotes plate waste and not preparation waste.

Sugar rationing had not been in effect long enough to have made drastic changes in the average figure. A general decrease in certain

foods and likewise a decrease of total food consumption was becoming apparent by the end of May, 1942. Decreases in meat, butter and other items are more noticeable in the succeeding months, but do not show on the basis of a yearly average. Food costs have increased about three cents per person per day during 1941-1942, as compared with 1940-41.

The personnel with the dietary departments is headed in most institutions by a trained and experienced dietitian. The ratio of personnel to that of meals served varies considerably. A ratio of 1 dietitian to every 750 people served would probably meet most of the acute needs. The ratio of 1 dietary employee to every 60 people served is probably fairly satisfactory where patients are available in the various dietary functions. A centralized food preparation and service department usually requires less personnel than where a large number of preparation and service units are maintained. Frequently other departments, such as nursing, overlap in the responsibility of the food service, thereby reflecting a lower number of personnel in the dietary department. There is always some overlapping in this function but it is usually considered better organization to charge an employee who is actively engaged in dietary duties to the dietary department rather than to another department.

During the year 1941-42 there has been an increase in patient population with very little increase in dietary personnel. This has brought about a change in ratio which might indicate a lowering of standards. The high turnover rate and difficulty in obtaining desirable personnel, which is not shown, has been one of the chief institutional problems.

Table IV indicates the trend in prices of certain type foods for a period of five years. The figures given were obtained from the prices submitted from nineteen institutions including mental hospitals,

schools for mental defectives, and penal institutions. The prices for the month of October 1942 were inserted since drastic increases had occurred in many commodities. The greatest increases were probably in the case of cheese, butter and eggs. The price of milk has remained stationary since this item is largely produced on the institutional farms and, to date, there has been no fluctuation in this price. The prices of potatoes, cabbage and carrots are also those charged by the institutional farms.

Table III indicates the per capita food costs for a period of one year at the State-owned medical and surgical hospitals. The fact that it is based on patient population rather than total number of meals fed, should be kept in mind. Practically all of the hospitals supply their employees and nurses with meals. The presence of a school of nursing and the physical characteristics of the buildings contribute greatly to the differences in the ratio of dietary personnel in this group of hospitals.

Farms

Institutional farms are maintained in connection with twenty-four institutions. A total of more than 31,665 acres is included in these farms, about 15,300 acres of which are tilled. The returns to the institutions include, in order of importance, protection, wholesome work opportunity, and a better quality of food at less cost than could be purchased from budgets available.

Table VIII shows the acreage, total and tilled, at each institution. A definite plan obtains for each acre. This plan is based on the policy that the following products, in order, should be produced as needed to the extent that land and other facilities are available: vegetables, potatoes, crops to support dairy, piggery, hennery and

other livestock. After such tilled crops are provided for, the remaining acreage is planned and maintained for pastures and woodlots.

Employment of patients or inmates is also shown. A total of 1904 persons are employed regularly in farm activities, with the larger proportion working with general farm crops and in gardens. This number is greatly increased at times during the Summer and Fall seasons when vegetables, potatoes or fruits are being harvested. The varied opportunity thus presented to the medical staff at the several institutions in placing mental patients is considered of great value. A comparable value toward rehabilitation is obtained at the penal and correctional institutions. At Rockview alone, upwards of 300 prisoners are employed in farm activities regularly.

Table IX shows the milk production per cow, egg production per hen, and the crop index for 1929 as compared with 1942. It will be noted that the efficiency of production per cow is one-third higher in 1942 than in 1929. This makes possible a very considerable economy in production because one-third more milk is being produced with the same number of cows and therefore with no greater building space involved or the cost of maintaining added individual animals. The 11,000,000 pounds more milk makes possible a much better diet at a considerable saving over that of purchased milk. The saving alone would be estimated as at least \$125,000 per year.

A similar economy is represented in the 70% increase in eggs produced per hen in 1942 as compared with 1929. Even though the number of eggs has more than quadrupled, very few institutions as yet produce a half egg per day per capita, which is recognized as the minimum goal.

The crop index figure as indicated reflects a comparison between institutional yields of farm crops and those of individual farms in the same counties. It is gratifying to note that from 1929 to 1942 institu-

tional crop yields trended upward--from 12% above the average for private farms to 47%. The goal set in 1928 was 50% increase over average farm yields.

It will be noted that in Table VII at the penal and correctional institutions one paid employee only is listed for the livestock and garden activities, except for one institution. One employee only is responsible at the piggery and hennerly, respectively, in connection with the mental institutions, except for three institutions. In this latter group, however, a number of paid employees are necessary for the farm, dairy, and truck garden activities. This is true because of the use of mental patients. While it is highly advantageous to give a patient an opportunity for wholesome exercise and work, their use entails a considerable responsibility which can be met only by trained employees. Population, tilled land, and number of livestock, are some of the factors deciding the number of paid employees on farm crops and livestock activities. Cost per capita per day included salaries, seed, feed--in fact, all items charged to the several activities.

Laundry

Laundry Table VI compares the average results of the first five test bundles with those of the 26th bundle. The last was one of four test bundles checking quality of work done in institutional laundries during the fiscal year ending May 31, 1942. It will be noted that the reports record the percentage of breaking strength loss, retention of white color, and soil removal. Marked improvements is evident in all three factors. Service and information secured through a connection with the Ellen H. Richards Institute of the Pennsylvania State College are important factors in developing and maintaining the improvement indicated. The service mentioned is shared with State-owned institu-

tions operating under the Departments of Public Instruction, Health, and Military Affairs.

In Table V laundry data is shown relative to the volume of goods, employees--patient and others--and costs per pound. The rather formidable total poundage of soiled goods amounts to over 42,000,000 pounds for the year. More than 60% of this total passes through the laundries of the mental hospitals. The highest per capita is, of course, found in the medical and surgical hospitals. By groups as to per capita load the other institutions range in the following order: mental hospitals, feeble-minded and epileptic, and penal and correctional institutions.

The per capita poundage of soiled goods for the different groups of institutions reflects the type of patients and inmates, as well as the care required for the varying groups. The figure is lowest for those in the penal and correctional institutions and highest for the medical and surgical hospitals.

Work opportunity is found in the penal and correctional, mental and feeble-minded and epileptic institutions for a total of 1277 inmates and patients. Institutional administrators welcome varied opportunity for employment. Efficiency is usually not a characteristic of such employees, if they can be termed such, but due to a rehabilitative or therapeutic program which exhausts all opportunities for wholesome work, and to restricted budgets preventing a full quota of paid employees, the work accomplished by inmates and patients is important.

Washing costs include all soaps and detergents, while gross costs include this group and in addition repairs, salaries, and other items. While the gross cost at mental and surgical hospitals is slightly over 1¢ per pound, the average for all institutions is less than 1/2¢ per pound.

Engineering

The engineering activities cover the various utilities used in conjunction with the operation of the institutions and the maintenance problems that affect the continuity of each of the utilities together with the care of the physical property. Table I covers the annual costs for the purchase of the basic maintenance materials and utilities. The purchase of coal is the largest single item. The purchase of electricity represents approximately 40% of the electricity that is actually used at the State institutions, the cost of electricity for the 1942 period being a lower average per HWH than the previous year 1941. The purchase of water represents approximately 1/6 of the water that is used at the institutions.

During the past year additional utility loads have been placed upon the institutions due to the fact that buildings that were constructed under The General State Authority program have now been put in use. This, together with the additional population, justifies the increase in the cost of utilities consumed.

Hospital Service

Table XI shows an Analysis of Hospital Service at ten State-owned Medical and Surgical Hospitals. This report reveals a large volume of laboratory work done in the majority of these institutions. In comparison to the report of last year, it will be noted that more of the sulfa drugs are being used and their effects carefully studied. A similar comparison with data for 1941 indicates increased attendance at clinics.

Improved Facilities for Treatment of Patients

Blood banks have been established in a majority of the Medical and Surgical Hospitals. The blood plasma is most valuable for patients in shock and it is considered an excellent defense measure in industrial areas.

The solarium of the Pediatric Department of the Scranton State Hospital is equipped with a large ultra violet lamp for treatment of convalescent children who have malnutrition, rheumatism, rickets, etc.

Many of the new buildings opened in the mental institutions are well equipped with facilities for Physiotherapy and Hydrotherapy. This affords various forms of treatment in these specialties to greatly increased numbers of patients. A building for patients with Tuberculosis at the Harrisburg State Hospital is excellently equipped. Improved X-ray equipment has provided a few of the institutions for feeble-minded and epileptic an opportunity for early diagnosis, resulting in better segregation of patients with Tuberculosis.

Nursing Education

Schools of Nursing offering a three-year course are maintained in four Medical and Surgical Hospitals--Ashland, Hazleton, Philipsburg, and Scranton, and in the Danville State Hospital for mental diseases, (see table XIIa). Three-months' affiliate courses in Psychiatric Nursing are offered at the Warren State Hospital with an average of thirty-nine students, eight schools affiliating; and at the Allentown State Hospital with an average of forty students, six schools affiliating, (see table XII-b). The interest and spirit shown by the Medical Staff members who assist with the teaching is commendable.

At the Hazleton State Hospital, a former laundry was rebuilt to provide for an educational building. When fully equipped, this building will offer splendid laboratory facilities for the school program. Equipment, including anatomical charts, a skeleton, and microscopes, has been secured in some of the schools to aid with the teaching program.

On the graduate staff of eleven hospitals, Head and General Staff Nurses have been taking post graduate courses in the specialties, while others are continuing with their academic education offered in

extension and summer courses. This reveals a desire for growth and progress. Nursing Staff conferences with a prepared program are being held in most of the State hospitals with encouraging effect.

Courses for Attendants

Table XII-c The Harrisburg and Wernersville State Hospitals continue to offer courses approved by the Department of Public Instruction for attendant training for men and women. The need is great for men and women trained in the care of the mentally ill and it is a source of pleasure to find individuals of high type seeking these courses.

Civilian Defense Programs

The defense programs throughout the State hospitals are usually well organized. Courses given include--First Aid, elementary and advanced, Air Raid Wardens' Course, Home Nursing, Red Cross Volunteer Nurses Aides Course, and Refresher Courses for graduate nurses.

Personnel

The matter of retaining in the State-hospitals a sufficient number of nurses and attendants to maintain approved standards, constitutes a serious problem. In normal times the mental hospitals have been understaffed with nurses, and during this emergency the average mental institution has approximately one-half of the quota of nurses and greatly reduced staff of male attendants.

COUNTY HOMES

Population - December 31

1925 - 1942

BUREAU OF COMMUNITY WORK

Children's Census

The annual census of children under the care of the institutions and agencies supervised by the Bureau of Community Work in the Department of Welfare was taken by the Division of Research and Statistics of the Department in cooperation with the Bureau. The assistance of the Council of Social Agencies in Philadelphia and the Federation of Social Agencies in Pittsburgh in collecting data from the institutions and agencies in their communities is appreciated.

Statistical tables XIII to XVII give results of the census for the year ending December 31, 1941. Reports for this year were made by 313 separate child caring organizations, the same number which reported in 1940. The census does not include the Juvenile Courts.

In 1941 reports were not received from 12 institutions, 4 child placing agencies, 3 maternity homes, 1 institution for physically handicapped children, 1 miscellaneous institution, and 1 institution for delinquents.

On December 31, 1941, the 313 organizations which reported had under care 39,478 children (including children and young people under 21 years of age). Of this group 5524 children were receiving supervision in their own homes and 1460 children were receiving care in day nurseries, leaving 37,810 children receiving care away from their own families.

County Home Population

Figures given in Tables XIX to XXIII relate to County Homes which also come under the supervision of the Bureau of Community Work in the

Department of Welfare. Figures in these tables are compiled from individual records submitted by County Institution Districts. Various kinds of social data contained in the individual record cards are presented in the tables.

Table XX relates to the cause of admission to County Homes. It will be observed that the reason for admission given in 1302 cases was old age and of this number 835 were listed as 70 years of age or above. It may be assumed that these persons are in need of institutional care or were for some reason unable to adjust outside of the institution and thus were not eligible for old age assistance. 440 are listed as unable to find employment. It is interesting to note that the largest number in this classification, 253, fall in the 50 to 70 years old group. There were also in this classification 63 persons between the age of 21 and 40, and 89 between the age of 40 and 50 years. The question of how many of this group, admitted to County Homes because they were "Unable to find employment", might qualify for public assistance could be answered only by means of a case analysis. The same is true of 1376 recorded as admitted for "other causes". For the most part other reasons for admission given appear to come within one definition of "dependent" (persons who are in need of public care because of mental or physical infirmity who under the County Institution District Act are the legal responsibility of the Commissioners acting as authorities of the County Institution Districts.
